

ISA2.5

ISA2.5 Gateway Router

The ISA2.5 Gateway Router offers superior Home / Office Class Router, Firewall, & 2VPN connection services. The ISA2.5 Internet Security Appliance is a user-friendly, Home and Small Office Class Firewall, and VPN appliance that is perfectly suited for telecommuters and small offices that require secure high-speed access to remote network resources. The ISA2.5's easy to use Web management interface and setup wizards make the setting-up and managing VPN connections a breeze.

The ISA2.5 inherits the product lines successful robust ICSA-certified, Stateful Packet Inspection Firewall with integrated IPSec and advanced security features. The ISA2.5 can provide secure IPSec connectivity to corporate headquarters or other branch office locations, and is compatible with most any manufacture's IPSec VPN gateway.

Additional value-added benefits include Dial Backup and Traffic Redirect features that increase reliability by supporting multiple Internet connections, for those with emergency outbound internet access needs. The ISA2.5 also supports ICF – Internet Content Filtering to protect network users and increase productivity by automatically enforcing acceptable Web Use company policies.

Benefits:

Virtual Private Network (VPN) Connection

- The ISA2.5 supports two IPSec VPN suitable for remote site to central server deployment and home to office or office to home deployments. Data encryption over the Internet helps ensure secure transmission between the two sites eliminating the need for expensive leased lines, and enabling global interconnectivity at a minimal expense. With the Redundant IPSec VPN feature, the ISA2.5 C has the option to establish back-up tunnels to main sites as well.

Secured Firewall Protection and Blue Coat

- The ICSA Labs certified firewall if the ISA2.5 provides robust firewall protection, based on Stateful Packet Inspection (SPI) and Denial of Service (DoS) technology. The ISA2.5 helps provide perimeter defense against hackers, and other malicious threats. Optional Blue Coat subscription services can assist in keeping spyware, malware, and phishing exploits from attacking your PCs, and help protect business and family from illegal and unwanted surfing.

Maximum Bandwidth Provision

- The ISA2.5 can maximize bandwidth utilization based on IP addresses and/or application types. Designed to ensure critical applications, services and specified users have the right amount of bandwidth when required, for applications and services.

Traffic Redirection for Broadband Backup Connection

- The ISA2.5 increases reliability by supporting optional Fail-Over and Fail-Back technologies. The optional user selected back-up ISDN or Analog Modem outgoing internet access connections can automatically switch traffic back to the WAN Port, when the primary in/out access WAN connection is re-established. The ISA2.5 backup feature ensures access to the net while decreasing the likelihood of outbound access potential down times and associated operation losses.

Broadband Internet Access Sharing

- The ISA2.5 increases reliability in support equipped with a basic in-unit four-port 10/100 Ethernet switch, allowing multiple users to share one broadband Internet Connection
