

ISA5WR

ISA5WR Router, Firewall, 10VPN

RECOMMENDATION; The Internet Security Appliance 5 (ISA5) is for Small Offices/Home Offices (SOHO) looking for a cost-effective and easy-to-deploy security appliance and VPN connection - SOHO requiring reduced operational costs through flexible traffic management - SOHO needing a dynamically updated database for accurate and effective Web Content Filtering services (powered by Cerberian) - SOHO or workgroups requiring transparent firewall for flexible and easy deployment - SOHO looking for flexible port design with optional DMZ configuration.

Benefits; VPN Connection Support - The ISA5 VPN support allows a business to establish a private tunnel over a public network between its headquarters and branch offices or telecommuters. The data is encrypted when traveling over the public network to ensure secure transmission between two sites. This application is a more economical replacement for leased-line service.

Real-Time Attack Alert & Log System - Many of today's businesses have been victimized by the costly theft of internal data. The ISA5 attack alert system warns you in real time whenever there is an attack on your network, allowing you to expeditiously repair any damage caused by the intrusion and prevent further damage to your network. A Log function will record where the attack came from, thus tracing who is responsible for the intrusion.

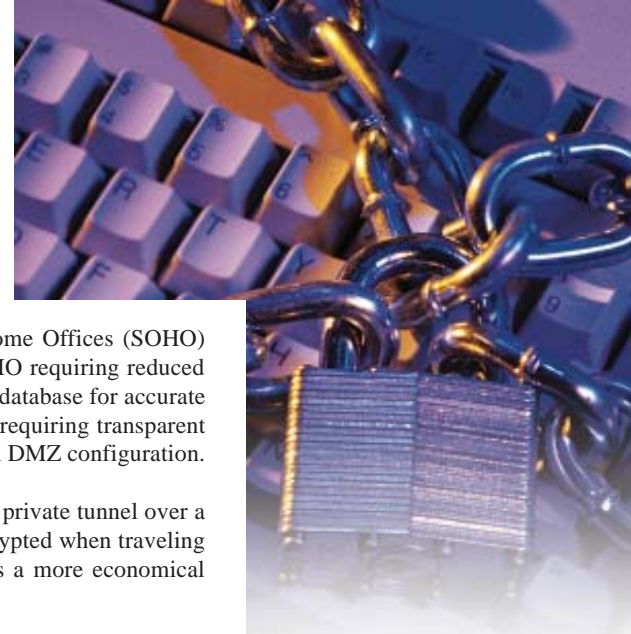

Content Filtering Management - By using the Content Filtering feature available on the ISA5, schools and businesses can create and enforce Internet access policies tailored to the specific needs of the organization. The administrator selects content from a predefined list to block or monitor access to Web sites containing pornography, gambling, or racial intolerance. Because content on the Internet is constantly changing, the Content Filtering List database continuously updates itself to ensure that access restrictions to new and relocated sites are properly enforced.

Secured Default Configuration - The ISA5 has been developed to satisfy a variety of organizations by providing strong firewall capability and full VPN support. The level of security provided by the ISA5 is dependent on the specific configuration set by the administrator. By default, the ISA5 provides a secure configuration with a user-friendly interface. The interface provides both the convenience of ease of installation and quick configuration.

Remote Security Client Agent, VPN client software - The ZyWALL RSCA is an easy-to-use VPN client software, which is an optional buy when purchasing ISG series Internet Security Gateways. The software allows a remote user to establish a private tunnel over a public network between two geographically dispersed locations. The product supports market leading embedded operating systems, such as Windows 95, 98SE, Me, NT4, 2000 and XP.

	Client for MS-Windows OS, 9x/NT4/XP, per PC, for ISA5.				
H.	Optional: WRAir B100/120 add-in PCMCIA Wireless Cared, 802.11b. compliance for Wireless Local Area Network access, one needed in Router	\$69.95	\$15.00	\$2.00	\$2+\$8+\$10/Mo.

The ISA5 & ISG35 Routers are ideally partnered with our P2000W IP Phone units.

Features

Virtual Private Network

- 10 simultaneous IPsec VPN Connections
- Max. 25Mbps 3DES/AES VPN performance
- Manual Key, IKE and PKI(X.509)
- IPsec NAT Traversal

Firewall Security

- Transparent Firewall (bridge mode) 80MB throughput
- Stateful Packet Inspection
- DoS and DDoS Protection
- Real-time Attack Alert and Logs

Traffic Management

- Policy-based Traffic Shaping
- Priority-bandwidth Utilization
- Guaranteed and Maximum Bandwidth Allocation

Content Filtering

- Java/Active X/Cookie/Proxy Blocking
- URL and Keyword Blocking
- Web Content Filtering (Cerberian)

Network

- DHCP client/relay/server
- PPPoE
- PPTP

System Management

- WebGUI (HTTP and HTTPS)
- Command Line Interface (Console, Telnet, SSH)
- Firmware Upgrade (WebGUI, TFTP/FTP/SFTP)
- Vantage Centralized Network Management

Wireless Option

- IEEE 802.11b/11g compliant
- 128-bits WEP Encryption
- IEEE 802.1x Port-Based Auth
