

Filtering

*PenTeleData locks down the Internet with a high performance **PADLOCK** filtering solution.*

*Imagine lowering your company's overhead, avoiding costly legal liabilities and preserving network bandwidth...this and much more is now possible with PenTeleData's **PADLOCK** filtering solution.*

PADLOCK is a revolutionary new service offered by PenTeleData. Simply, it's an easy to use, cost effective way to regulate traffic flowing in and out of your company's Internet connection. We all praise the Internet for revolutionizing the way we do business. However, there are very valid reasons why you should protect your company's interests by implementing a **PADLOCK** filtering solution from PenTeleData.

It is estimated that, in a typical company, employees spend 10-30% of their on-line time engaged in activities completely unrelated to business. These activities include surfing pornographic sites, job hunting, viewing sport sites, stocks, gambling and much, much more. The cost to your company can be equated into thousands – even tens of thousands of dollars. But it doesn't have to be that way.

And how about Legal Liability – One of the biggest concerns at most companies is the liability they incur when employees view or download sexually explicit content. The number of lawsuits already filed and won by offended employees makes this a leading reason to invest in a superior filtering solution such as **PADLOCK** from PenTeleData.

And of course, there's your network. When employees download movies, music or photographs, network performance can slow down to a crawl. This can significantly degrade the performance of virtually every computer hooked up to the company network!

Let us help you keep your business focused on what it does best...business. A **PADLOCK** filtering solution by PenTeleData is so affordable and effective that it can *pay for itself in as little as one week*! It's easy to see why businesses like yours insist on a **PADLOCK** filtering solution by PenTeleData. It just makes sense.

*"We evaluated all of our options and feel confident that our **PADLOCK** solution offers our customers the most advanced filtering solution available industry wide while maintaining an affordable price."*

Jeff Reinhard
General Manager
- PenTeleData

* The money lost from *only 5 employees* at \$10.00/hr spending one hour a week doing personal web surfing is enough to pay for **PADLOCK** for AN ENTIRE MONTH!

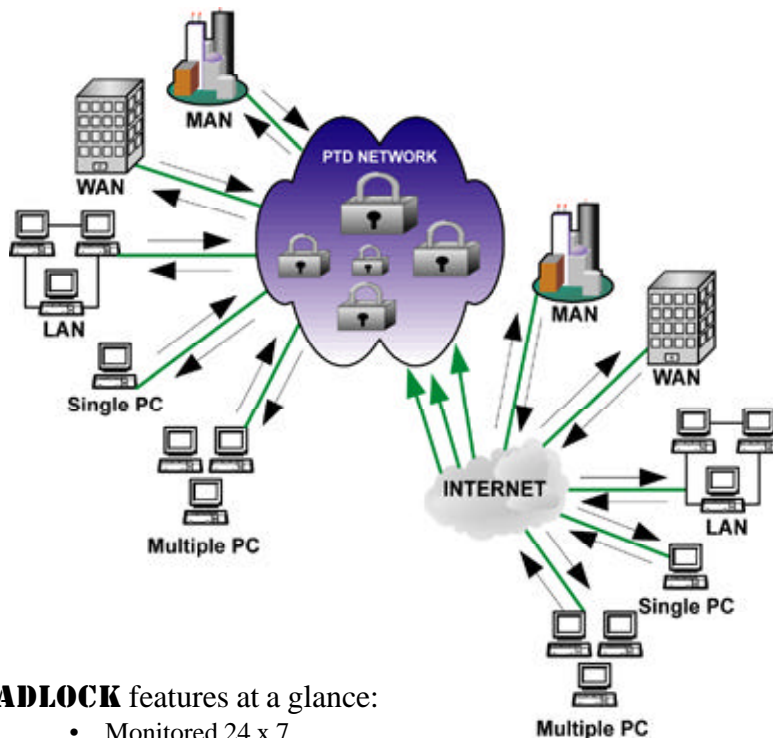

PADLOCK Filtering Solution

PADLOCK is the next generation of content filtering now available to businesses that want clean, usable business class Internet. This hassle free filtering solution does not require the customer to have any technical knowledge to implement. A simple telephone call is all it takes.

PenTeleData's high performance **PADLOCK** filtering solution was designed to accommodate small, medium and large scale organizations – up to 15,000 users concurrently. **PADLOCK** uses a patented search array that actually visits questionable Internet sites and reports where they are located, and whether they have their own domain or are on a shared server. Once the URLs have been identified as questionable, engineers physically access the URL to assure accuracy. This process occurs 24 hours a day, 7 days a week.

The **PADLOCK** filtering solution can be used to effectively block a variety of items or services. This filtering solution can be configured to block: specific routed ports, IP addresses and 32 different categories of questionable material. Our "category blocks" are fully customizable via an HTML interface page. Simply open the page and choose what categories you desire to have blocked. It's that simple! With our **PADLOCK** filtering solution you can establish your own company administrator who has the ability to setup and manage four profiles in addition to the master account. This will allow flexibility in the selection of the filtering categories for the various users of your network.

A **PADLOCK** filtering solution from PenTeleData will work with virtually any size network or type of connection.

PADLOCK features at a glance:

- Monitored 24 x 7
- Redundant multiple filtering points
- Filters specific IP addresses
- Filters ports/services (AOL, Napster, IRC, pcAnywhere)
- Filters WWW content/sites
- Filters FTP (file transfer protocol) traffic
- Filters Newsgroups
- Works with virtually any size network
- Works with virtually any type of connection:
*Dialup, T-1 or greater, ATM, VPN, SMDS,
Frame Relay, Cable, DSL, ISDN etc...*
