PENTELEDATA I.T. SERVICES REMOTE PROACTIVE MANAGEMENT

"I.T. can get complicated, but our Pros make it easy...for YOU."

Jaime Mendes
V.P. of Operations, PenTeleData

Remote Proactive Management (RPM) from PenTeleData's I.T. Services is for any customer wishing to remain hands-off yet have peace of mind with their I.T. infrastructure.

RPM options provide a host of services with subscription levels that make sense for any budget. This proactive approach allows the customer to take a step back and release the stress and worry of their I.T. infrastructure on to us. Service options range from simple antivirus to fully managed servers or network infrastructure.

PenTeleData I.T. Services can remotely install the required software on your network to manage your entire I.T. infrastructure. Once the software is installed, we have tools to effectively support remote access tools, monitoring of system health, managed antivirus, and patch management. RPM service is focused on providing remote management and support, so most things can be handled without us having to dispatch a technician on-site. But, should the need arise, we can dispatch to the customer location with added knowledge and tools to make the service request more efficient.

RPM is a must-have product for ensuring the security of confidential and private online data, especially for businesses with work-from-home and other remote work options. RPM subscription may be applied to any device, such as: Servers, workstations, laptops, routers, switches, and access points. Outdated firmware on network devices, outdated operating systems, and unpatched third-party applications such as Adobe and Java are entry points for attackers. Since most hackers take advantage of known exploits in code, having RPM services will help to ensure those exploits are taken care of before it's too late.

Why choose PenTeleData Remote Proactive Management?

- > Support of our experienced and industry trained I.T. Services Team
- > Personalized solutions so you only pay for what you need
- > RPM services allow our customers to place the worry of IT on us
- > Super low cost makes managing I.T. infrastructure extremely affordable
- > No long-term contracts, month-to-month service is flexible as business grows or if there is a need to scale back
