

Cisco 6825 IP DECT Cordless Phone

Secure mobile voice Communications

The Cisco® IP DECT 6825 IP DECT Cordless phone is a cost-effective, multi-cell, high-fidelity DECT voice communications portfolio designed to improve your organization's person-to-person communications while reducing your operating costs.

The Cisco® IP DECT 210 Multi-Cell Basestation allows for up to 250 integrated base stations, maintaining up to 1000 Handset registrations and 2000 calls. The 210 Basestation allows you to start with a small deployment and grow to a much larger solution, adding base stations to extend range and capacity.

Feature list

An easy-to-use interface that provides a traditional telephony-like user experience.

2 in. 240 x 320 pixels 64K TFT Graphical Display.

Hearing-Aid-Compatible (HAC) and meet Federal Communications Commission (FCC) loudness requirements for the Americans with Disabilities Act (ADA).

Headset compatible via Bluetooth LE or 3.5 mm wired headset connection.

A volume-control toggle provides easy decibel-level adjustments of the handset, monitor speaker, and ringer.

A full-duplex speakerphone gives you flexibility in placing and receiving calls.

The charging cradle holds the phone in a single position. The charging cradle comes with a USB Type-A connector to directly connect the power adapter of your choice or via the supplied power adapter.

The handset is wall-mountable, with a separate orderable part number.

The 210 Multi-Cell Basestation is 10/100 Power over Ethernet (Class 2) compatible.
